# Rajalakshmi Engineering College

Name: KEERTHANA S

Email: 240801161@rajalakshmi.edu.in

Roll no: 240801161 Phone: 9345818052

Branch: REC

Department: I ECE FB

Batch: 2028

Degree: B.E - ECE

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 1\_COD\_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Imagine you are working on a text processing tool and need to implement a feature that allows users to insert characters at a specific position.

Implement a program that takes user inputs to create a singly linked list of characters and inserts a new character after a given index in the list.

## **Input Format**

The first line of input consists of an integer N, representing the number of characters in the linked list.

The second line consists of a sequence of N characters, representing the linked list.

The third line consists of an integer index, representing the index(0-based) after

which the new character node needs to be inserted.

The fourth line consists of a character value representing the character to be inserted after the given index.

#### **Output Format**

If the provided index is out of bounds (larger than the list size):

- 1. The first line of output prints "Invalid index".
- 2. The second line prints "Updated list: " followed by the unchanged linked list values.

Otherwise, the output prints "Updated list: " followed by the updated linked list after inserting the new character after the given index.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 5
abcde
2
X ,6
Output: Updated list: a b c X d e
Answer
// You are using GCC
#include<stdio.h>
#include<stdlib.h>
typedef struct Char {
  char value;
  struct Char* next;
}node;
node*newnode(char value)
  node* new_node = (node*)malloc(sizeof(node));
new_node->value = value;
  new_node->next = NULL;
```

```
return new_node;
void insertnode(node** head, char value)
   node*temp = *head;
   if(temp == NULL)
     *head = newnode(value);
     return;
   while(temp->next != NULL)
     temp = temp->next;
 temp->next = newnode(value);
 int length(node* head)
   int len = 0;
   while(head!= NULL)
     head = head->next;
     len++;
   return len;
 void traverse(node* head)
   while(head != NULL)
    printf("%c ",head->value);
    head = head->next;
   printf("\n");
 void insert(node** head, int pos, char value)
   if(pos >= length(*head))
     printf("Invalid index\n");
    return;
```

```
240801161
for(int i=0;i<pos;i++)
        temp = temp->next;
       node* new_node = newnode(value);
       new_node->next = temp->next;
       temp->next = new_node;
    int main()
       int n;
       char value;
scanf("%d",&n);
for(int i=n·i
       node* head = NULL;
      for(int i=0;i<=n;i++)
         scanf("%c ",&value);
         if(value == ' ' || value=='\n')
           continue;
         insertnode(&head, value);
       }
       scanf("%d %c",&n,&value);
       insert(&head, n, value);
                                                     240801161
יייני ("Updated");
traverse(head);
       printf("Updated list: ");
```
